

# ALEXANDER McQUEEN

## SPRING/SUMMER 2014 EYEWEAR COLLECTION

The Spring/Summer 2014 Alexander McQueen eyewear collection features sunglasses and optical frames with new interpretations of the brand's most iconic details, such as the skull. This latest collection boasts skilful manufacturing techniques and precious materials, perfectly blending tradition with a modern flair, to reflect the brand's unique style.

### SOPHISTICATED COLORS

Mod. AMQ 4247/S, AMQ 4248/S and AMQ 4249

The decades of the 50s and 70s inspire these women's oversized cat-eye acetate sunglasses and optical frames. The upper front profile has a distinctive sculpted shape highlighting the eye. The style is available in bold colour combinations, such as havana/black and white/light blue as well as classic shades of red, navy blue, light havana/dark havana and total black.

### LUXURIOUS DETAILS

Mod. AMQ 4251/S and AMQ 4252

Retro-inspired and butterfly-shaped, these women's sunglasses and optical frames feature a combination of metal inserts on the upper front profile. The gold and palladium grey tones of the inserts stand out against the understated tones of black, havana/brown, havana/grey, white and burgundy, giving the style a particularly luxurious feel.

### NEW SKULL

Mod. AMQ 4245/S

These large women's acetate sunglasses have a vintage feel and feature the brand's iconic skull on the hinges, with an added flower detail in line with the SS14 catwalk collection. The color palette includes timeless hues of black, havana, white, brown and striped purple with shaded brown or grey lenses.

The collection is available starting in January 2014.

The Alexander McQueen collection of sunglasses and optical frames is produced and distributed by the Safilo Group.
